## **NV-center qubits**

This virtual quantum device is inspired by devices reported by the Delft team

## VQD setup

Set the main directory as the current directory

In[1]:= SetDirectory[NotebookDirectory[]];

Load the QuESTLink package

One may also use the off-line questlink.m file, change it to the location of the local file

In[2]:= Import["https://qtechtheory.org/questlink.m"]

This will download a binary file quest\_link from the repo; some error will show if the system tries to override the file

Use **CreateLocalQuESTEnv[quest\_link\_file]** to use the existing binary

In[3]:= CreateDownloadedQuESTEnv[];

Load the **VQD** package; must be loaded after QuESTlink is loaded

In[4]:= Get["../vqd.wl"]

## User device configuration

**Qubit 0** indicates electron spin, and the rest are nuclear spins  $C^{13}$  and  $N^{14}$  – if applicable

Time unit is **second** (s)

Frequency unit is Hertz (Hz)
